

Since 1984 linear recumbents have been among the most comfortable and relaxing bicycles available. Their stable handling, comfortable seat and natural arm position make them a pleasant and relaxing way to exercise, like a lawn chair on wheels. After their first ride on a Linear recumbent one customer said, "If my butt had wheels this is what it would feel like!" This bike is not for racers after a speed record. It is a great bike for folks who want to comfortably enjoy low impact, outdoor exercise again.

Most riders quickly get used to this bike. It's Long Wheel Base (LWB) makes it stable at speed while it's linkage steering gives low speed maneuverability, "U" turns are accomplished without much effort.

For 2005 they are the only LWB USS Aluminum recumbent made in the US.

2005 Linear standard features

- Reinforced frame, stronger, more durable
- Stiffer frame, less pedal effort on hill climbs
- Shimano Deore LX rear derailleur
- Shimano Ultegra Bar-Con 24 speed shifters
- Kenda Quest 100 psi tires
- Dual linear-pull brakes for sure stops
- Bar-ends, more ergonomic hand position

The History of Linear Recumbents

In 1984 Kann Manufacturing, in Iowa, introduced the Linear recumbent. It was an foldable aluminum long wheel base bike with over seat steering. The Under seat steering model was soon added to the Linear lineup. Linear recumbent riders have ridden their bikes coast to coast dozens of times.

Linear recumbents from the 80's

In 2002 Bicycle Man LLC purchased the assets of Linear and moved production to western NY. We spent the first year and a half bringing this classic up to date. With stronger, stiffer frames, handlebars and brakes it is now more durable, comfortable, faster and better on hill-climbs than ever before. Working with computer stress analysis we continue to refine this classic design for the future.

At \$1595 Linear remains the best value in a comfy Long-Wheel-Base, Under-Seat-Steering recumbent.

LWB USS recumbents since 1984!

The new Linear "Limo"

Updated, upgraded, re-engineered!

In 1984 Linear began marketing the most comfortable USS bicycle in the world.

Now with:

- updated ergonomic features
- upgraded Shimano components and a
- re-engineered 6061-T6 aircraft aluminum frame

Linears are still the best value in a Long-Wheel-Base, Under-Seat-Steering recumbent.

And they are still made in the USA!

Since 1984 linear recumbents have been among the most comfortable and relaxing bicycles available. Their stable handling, comfortable seat and natural arm position combine to make them a pleasant and relaxing way to commute, travel, run errands or exercise. After riding a linear one first time recumbent rider said, "If my butt had wheels this is what it would feel like!" This bike is not for racers after a speed record. It is built for folks who want to enjoy low impact outdoor exercise again. A linear is also enjoyable low environmental impact transportation.

Most riders quickly get used to this bike. It's Long Wheel Base (LWB) makes it stable at higher speeds while it's linkage steering gives low speed maneuverability, "U" turns are accomplished without much effort.

For 2005 they are the only LWB USS Aluminum recumbent who's frame is made in the US.

2005 Linear standard features

- Reinforced frame, stronger, stiffer & less effort
- Shimano Deore LX rear derailleur
- Shimano Ultegra Bar-Con 24 speed shifters
- Kenda Quest 100 psi tires
- Dual linear-pull brakes for sure stops
- Bar-ends, even more ergonomic hand position

How would you get your recumbent to Paris?

If World travel is on your cycling agenda take a look at the Linear folder! Linear made the first recumbent bike that folded for airline travel in the early '80s. Why leave the comfort of a recumbent home and tolerate an uncomfortable bike on your dream trip?

Some riders also like the foldable model because it is easier to pack in their car, carry up a flight of stairs or store in their apartment. Whatever your need, the folding option adds versatility to the bike. It also adds about a pound to its weight and \$300 the price...

If you don't need the folding feature we recommend our lighter, simpler, more durable and less expensive welded model.
